

# FEATURED TESTIMONIALS

**Eric Nietsch, Head of Sustainable Investing, Asia at Manulife Investment Management,**

“STACS ESGpedia portfolio monitoring tool is intended to allow us to see greater asset level details, such as the green certifications of the buildings financed by green bonds. This would support our ongoing due diligence and monitoring of investee companies.”

**Linus Goh, Group Managing Director & Head, Global Commercial Banking**

“Digitalisation is a critical enabler for businesses in their pursuit of sustainability. We are glad to partner Ghim Li in this Sustainability Linked Loan, working with STACS to leverage the digital solutions on ESGpedia to make it easier to track and measure operational and emissions-related data for sustainability reporting. We believe the shift towards sustainability by SMEs and corporates will accelerate with the increased availability of digital and data-driven tools to support the transition and financing of their businesses.”

**Eric Lim, Chief Sustainability Officer at UOB**

“At UOB, we believe that what gets measured, gets done. The use of technology in initiatives such as Project Greenprint's ESGpedia will go a long way in making sure that quality and verified ESG data is available and comparable. With companies communicating more clearly their environmental, social and economic impact, banks, including UOB, will be able to have more meaningful conversations with them and through financing, support them in global, regional and sectoral transitions.”

**Jonathan Ne Win, Vice President of ESG Finance, MUFG**

“ESGpedia enables us to reach the client in a much more effective way. When we drill down to individual buildings, there are updated data there which helps us get our Relationship Managers equipped to have a much more thoughtful conversation with the client.”

**Chia Ko Wen, Head of Sustainability, Singlife**

“Announcing our collaboration with cutting-edge industry partners such as CO2 Connect and ESGpedia is testament to the hard work that many have undertaken to transform the transportation and logistics industry into one that is sustainable, ethical, and aligned with Singapore's wider environmental goals. Our ambition is not just focused on helping our valued clients find better ways to manage their financial and sustainability targets ethically, but to do so in a data-driven and seamless way.”

**Thaw Yee Leng, Head of Market Development at SGTraDex**

“The established connectivity with ESGpedia (powered by STACS) as part of MAS' Project Greenprint and Doxa enabled Green Mark certification and commercial data to converge through a single touchpoint, providing data access for the building and construction players and facilitating green trade finance decision by banks. This proof of value between SGTraDex and partner banks UOB, OCBC, DBS and Standard Chartered, supported by MAS, BCA and JTC had been instrumental to collectively accelerate the drive towards industry-wide sustainability outcomes.”
