1. Introduction

Morningstar has been appointed by Investment Management Association of Singapore (IMAS) and Life Insurance Association of Singapore (LIA) to monitor the performance of all unit trusts and investment linked insurance products included under the Central Provident Fund Investment Scheme (CPFIS). This report shows Morningstar's findings for the three months ended June 30, 2022.

3. Market Developments in Q2 2022

Equity Markets

During the second quarter of 2022, rising interest rates and growing fears of a recession rattled the market, as it is a challenging task for central banks—the U.S. Federal Reserve in particular—to bring inflation down without triggering a recession.

Inflation continued to simmer, as the annual inflation rate in the U.S. accelerated to 9.1% in June, the highest since November 1981. The pace of rising costs also quickened from 8.6% in May. Facing the stubbornly high inflation, the Fed took increasingly aggressive moves by hiking rates twice during the quarter, and the 75-basis-point raise in June was the biggest increase since 1994. The S&P 500 fell 16.45%, while the Nasdaq Composite marked a whopping loss of 22.44% for the quarter.

Concerns continued to mount over the lingering war in Ukraine, the resultant energy and food shortage, and higher inflation. The second quarter saw steep declines for eurozone shares, with France’s Euronext Paris CAC 40 down 11.07%, and Germany’s FSE DAX down 11.31%. Over the same period, the European Central Bank, policymaker for 19 nations that share the euro currency, joined the bandwagon to bring its deposit rate to zero in a surprise rate hike move. During the quarter, the Bank of England also hiked rates twice, putting its bank rate at 1.25%. The U.K.’s FTSE 100 Index fell 4.61%.

Turning to the Chinese markets, the second quarter marked a significant change in fortunes for many Chinese stocks when compared with a brutal previous year. Beijing has been sending signals to support domestic companies and ramp up policy support for the economy in the wake of lockdown-depressed economic data. As a result, China A-shares staged a relief rally. The SSE Composite Index, tracking the largest caps listed on the Shanghai exchange, returned 4.50% and became the only major stock market gauge that avoided a negative return during the quarter. Hong Kong’s Hang Seng Index came second, posting a negative return of 0.62%. The markets may have emerged from their worst, but both benchmarks still ended the first half with an approximately 6% loss.

Bond Markets

Fixed-income securities were unable to provide investors any refuge from losses during the second quarter. The U.S market faced an unusual combination of losses in both stock and bond markets, as the year-to-date period marked the third time in more than four decades where stocks and bonds both posted losses for two consecutive quarters. The last time investors saw back-to-back down quarters for stocks and bonds was in 2008, and before that, 1981. The FTSE WGBI fell another 6.32% for the quarter (in US dollars), after the first quarter's 6.10% loss.

Behind the market woes was the stubbornly high inflation, which had the Fed responding with monetary-tightening actions, including one rate hike in each of its May and June meetings. Rates have risen across the entire yield curve from a confluence of factors. In the shorter end of the curve, the U.S. Treasury two-year note rose to 2.92% from 2.28% at the end of March, and at the longer end of the curve, the yield on the 10-year ended the quarter at 2.98%, edging up from 2.32% from a quarter back.

Exhibit 5 U.S. Government Bond Market Movements (Proxied by US 10-Year Treasury Bill Rate)

Source: Morningstar Direct

The Singapore average buying rates of 10-year bond yields have been on an upward trend since August 2021, a trend similar to the U.S. Treasury bill. Singapore's bond yield increase steepened in the past couple of months and tested the level of 3% for the quarter as the 10-year bond yield peaked at 3.24% in mid-March and finished the quarter at 2.34%. This is compared with the yield level of 1.67% at the end of 2021, meaning that the yield level went up 131 basis points.

The Outlook

The volatile market environment continues to underscore the importance for investors to have a plan that balances their long-term investment goals with their risk tolerances.

In the U.S. stock market, the current level of undervaluation is the greatest discount to Morningstar's long-term, intrinsic valuations since the emergence of the pandemic in March 2020 and the growth scare that sent stocks lower in December 2018. Across the U.S. market, growth stocks are the most undervalued, as they were priced at a 22% discount to fair value at quarter-end. Value stocks were in line with the broader market average, which was trading at a 17% discount to fair value. Analysts deem the valuations to be a sign of the market being overly pessimistic regarding the economic outlook.

The current credit spread levels represent that the markets are pricing in a relatively high probability of a near-term recession in the United States. Considering that Morningstar analysts do not expect that the U.S. will enter a recession, spread levels provide investors with an attractive yield pickup for the added credit risk. As the economy expands, it will help limit defaults, resulting in fewer rating downgrades, and lead to ratings upgrades.

Morningstar analysts project that the US inflation will average 5.2% over 2022 and begin to decrease later this year, dropping to 1.7% in 2023 and bottoming out at 1.3% in 2024 before normalizing a little over 2.0% thereafter. This outlook owes greatly to the unwinding of price spikes caused by supply constraints in durables, energy, and other areas.

Closer to home, the average stock in the Morningstar Asia Index traded at 16% discount to its fair value as of the end of the quarter. The attractive level of valuation reflects that the worries have kept a lid on any optimism. Volatility may remain in third-quarter 2022 as the "zero-COVID" policy is maintained in China amid rising new cases and capital markets are pricing in higher inflation and interest rates. Downside risks from a European energy crisis remain a key uncertainty.

4. Summary: Performance of CPF Investment Scheme Funds

Exhibit 8 Average Return of CPFIS-Included Funds at End Q2 2022 (% in SGD)

Average Returns	For the period ended June 30, 2022 (% in SGD)			
	3 months	1 Year	3 Years (Cumulative)	3 Years (Annualized)
All CPFIS-Included Funds	(8.00)	(14.23)	8.48	2.59
Unit Trusts Only	(8.28)	(14.43)	10.17	3.07
ILPs Only	(7.83)	(14.10)	7.48	2.31

Source: Morningstar Direct.

Exhibit 9 Average Performance of CPFIS-Included Funds at End Q2 2022 (% in SGD)

Source: Morningstar Direct.

In the second quarter of 2022, the overall performance of CPFIS-included funds (unit trusts and ILPs combined) was down 8.00%, versus the first quarter's return of negative 6.01%. Global stock and bond markets endured a hard hit. The MSCI World Index, with more than 60% of assets in U.S. stocks, slid 13.81%, while the FTSE WGBI finished with a 6.32% loss. The MSCI AC Asia ex Japan Index also dipped 6.43% during the quarter. Funds under the CPF scheme lost an average of 14.23% and gained 8.48% on a one- and three-year cumulative basis.

Exhibit 10 Average Performance of CPFIS-Included Funds at End Q2 2022 by Asset Class (% in SGD)

Source: Morningstar Direct.

During the quarter, all asset classes, excluding money market products, finished the past quarter with a loss. Equity CPF funds registered a 9.57% loss and bond funds a 3.63% loss, while allocation funds fell 7.18%. Money market funds ended with a 0.15% gain.

Over the past year, equity and allocation products recorded double-digit negative returns. However, over longer reporting intervals, these two categories represented some of the best performers, with a three-year cumulative return averaging 11.59% for equity funds and 7.43% for allocation funds. The moderate losses in the second quarter more than halved their three-year cumulative returns from a quarter back. Bond funds moved to an average three-year loss of 1.73% from a 3.44% gain at the end of the first quarter of 2022.

Exhibit 11 Average Performance of CPFIS-Included Unit Trusts at End Q2 2022 by Asset Class (% in SGD)

Source: Morningstar Direct.

Exhibit 12 Average Performance of CPFIS-Included ILPs at End Q2 2022 by Asset Class (% in SGD)

Source: Morningstar Direct.

By Morningstar Category, China-related funds swung back to become top performers, with China equity returning 6.69% and China equity A-shares returning 1.56%. Greater China equity funds, which typically allocate assets to mainland China, Hong Kong, and Taiwan, notched a slight loss of 0.95%.

The worst performer among the equity categories was US large-cap growth equity, which slid 22.07% on average. Other poor-performing categories included Asia-Pacific equity and global large-cap growth equity, which produced losses of 16.80% and 14.59%, respectively.

Over the past year, US large-cap value equity was the only group that remained in positive territory, returning 3.91%. However, it was China equity–A-shares that topped the chart for the three-year period, with an annual return of almost 20% for the past three years. On the flip side, over a three-year period, Thailand and ASEAN equity struggled to perform, marking 21.28% and 15.26% losses, respectively.

For bond unit trust CPFs, all three categories, other bond (down 7.42%), SGD bond (down 2.78%), and Asia bond (down 2.23%) posted negative returns for the quarter. In a three-year reporting window, Asia bond posted a flat return, two other categories remained in the negative territory.

Over to the ILP universe, China-related products were also the best-performing equity categories. China equity ILPs returned 4.01% and Greater China equity funds gained 0.24%.

Sector equity technology finished the period with a 25.26% loss, widening the one-year loss to 30.93%. For the second quarter, global large-cap value equity and Europe large-cap blend equity ILPs were also among the worst-performing categories.

All bond ILP categories posted a negative return, a trend similar to the unit trust universe. Over the period, the category of global bond–euro biased, which consists of only one fund, posted the worst loss of 6.27%. Its poor return was closely trailed by funds with the same investment focus but with a US-dollar bias. Asia bond funds were more resilient for the quarter, falling 1.10% on average.

5. Summary of Performance

The Morningstar Rating is based on funds' risk-adjusted returns within its Morningstar Category peer group. Morningstar gives more weight to downside variation when calculating Morningstar Risk-Adjusted Return, or MRAR, because investors are generally risk-averse and dislike downside variation. Morningstar Rating is calculated within each category peer group because the relative star ratings of two funds should be affected more by manager skill than by market circumstances or events that lie beyond the fund managers' control. The Morningstar Rating is based on MRAR, using Morningstar Risk-Adjusted Return % Rank for funds in a category. Morningstar calculates ratings for the three-, five-, and 10-year periods, and then the overall Morningstar Rating is based on a weighted average of the available time-period ratings.

The overall Morningstar Rating weight is shown below:

Months of Total Returns	Overall (Weighted) Morningstar Rating
36-59	100% of three-year rating
60-119	60% of five-year rating 40% of three-year rating
120 or more	50% of 10-year rating 30% of five-year rating 20% of three-year rating

There are certain cases where funds are *ineligible* for Morningstar Rating. This includes funds which are:

- Categorized in any Other/ Miscellaneous category
 - Restricted funds
 - Virtual share classes. Also known as a convenience or currency class, virtual classes are investments whose performance is quoted in another currency, or allow investors to purchase shares in a currency other than its base currency
 - Inception date/ performance start date is shorter than 36-month continuous monthly returns available
 - Dormancy history led to shorter than 36-month continuous monthly returns available
 - Obsolete funds
 - Funds whose peer group contains less than five distinct portfolios
- **Morningstar Rating (The Star Rating)**

To determine a fund's star rating for a given time period (three, five, or 10 years), the fund's risk-adjusted return is plotted on a bell curve: If the fund scores in the top 10% of its category, it

receives 5 stars (Highest); if it falls in the next 22.5% it receives 4 stars (Above Average); a place in the middle 35% earns 3 stars (Average); those lower still, in the next 22.5%, receive 2 stars (Below Average); and the bottom 10% get only 1 star (Low). The Overall Morningstar Rating is a weighted average of the available three-, five-, and 10-year ratings.

- **Morningstar Return Rating**

An annualized measure of a fund's excess return relative to the return of the 90-day Treasury bill over a three-, five-, or 10-year period. This is a component of the Morningstar Risk-Adjusted Return. Morningstar Return is displayed in decimal format and is calculated only for those investments with at least three years of performance history.

- **Morningstar Risk Rating**

An annualized measure of a fund's downside volatility over a three-, five-, or 10-year period. This is a component of the Morningstar Risk-Adjusted Return. Morningstar Risk is displayed in decimal format and is calculated only for those investments with at least three years of performance history. A high number indicates higher risk and low numbers indicate lower risk.

- **Morningstar Fee Level**

The Morningstar Fee Level evaluates a mutual fund share class' expense ratio relative to other funds that invest in a similar asset class and have similar distribution characteristics. Within each comparison group, a fund share class' expense ratio is ranked against its peers using five quintiles. Each quintile corresponds to one of the following scores:

Low: Least expensive quintile

Below Average: Second-least expensive quintile

Average: Middle quintile

Above Average: Second-most expensive quintile

High: Most expensive quintile

- **Morningstar Sustainability Rating**

Morningstar assigns Sustainability Ratings by ranking all scored funds within a Morningstar Global Category by their Historical Sustainability Scores. The ranked funds are then divided into five groups, based on a normal distribution, and each receives a rating from High to Low. Although a higher rating is better than a lower one, please note that due to the risk component of the scores, lower scores are better (and lead to higher ratings) than higher scores and indicate that a fund is, on average, invested in fewer companies with a high ESG risk under Sustainalytics' ESG Risk methodology, and therefore exposed to less risk driven by environmental, social, or governance factors.

Percent Rank Rating Depiction

Top 10%: High, 5 globes

Next 22.5%: Above Average, 4 globes

Next 35%: Average, 3 globes

Next 22.5%: Below Average, 2 globes

Bottom 10%: Low, 1 globe

To receive a Portfolio Sustainability Score, at least 67% of a portfolio's assets under management must have a company ESG Risk Rating. The percentage of assets under management of the covered securities is rescaled to 100% before calculating the Portfolio Sustainability Score.

5.1 Morningstar Ratings for CPFIS-Included Unit Trusts

Full List of CPFIS Included UTs with Morningstar Data

Please note, funds need 36 months of performance history in order to have a Morningstar Rating and certain categories are not eligible for rating. For Sustainability Rating, at least 67% of the portfolio's assets under management must have a company ESG Risk Rating.

List A Funds

'List A' - Funds that have met all new admission criteria: i) The revised benchmark set at the top 25 percentile of funds in their global peer group; ii) Expense ratio (TER) that is not higher than that set by CPF Board by the respective risk class. The expense ratio criteria will also apply to existing funds from 1 January 2008 onwards; iii) 0% sales charge; iv) In addition, new funds applying for inclusion under CPFIS should preferably have a track record of good performance for at least 3 years.

6.1.2 Complete List of CPFIS Included ILPs

List A Funds

'List A' - Funds that have met all new admission criteria: i) The revised benchmark set at the top 25 percentile of funds in their global peer group; ii) Expense ratio (TER) that is not higher than that set by CPF Board by the respective risk class. The expense ratio criteria will also apply to existing funds from 1 January 2008 onwards; iii) 0% sales charge; iv) In addition, new funds applying for inclusion under CPFIS should preferably have a track record of good performance for at least 3 years.

6.4 Data Definitions

Return

Expressed in percentage terms, Morningstar's calculation of total return is determined each month by taking the change in monthly net asset value, reinvesting all income and capital-gains distributions during that month, and dividing by the starting NAV. Reinvestments are made using the actual reinvestment NAV, and daily payoffs are reinvested monthly. Unless otherwise noted, Morningstar does not adjust total returns for sales charges (such as front-end loads, deferred loads and redemption fees), preferring to give a clearer picture of a fund's performance. The total returns do account for management, administrative, 12b-1 fees and other costs taken out of fund assets. Total returns for periods longer than one year are expressed in terms of compounded average annual returns (also known as geometric total returns), affording a more meaningful picture of fund performance than non-annualized figures.

Annualized Returns

For standard time periods (1, 3 5 and 10 years) returns are annualized as follows:

$$\text{Ann Ret} = ((1 + \text{Cum Ret}/100)^{(1/y)} - 1) * 100$$

where,

Cum Ret = the cumulative return

y = the number of years (1,3, 5 or 10)

For customized time periods returns are annualized as follows:

$$\text{Ann Ret} = ((1 + \text{Cum Ret}/100)^{(365.25/d)} - 1) * 100$$

where,

Cum Ret = the cumulative return

d = the number of days between the start and end date

Annual Report Net Expense Ratio

The percentage of fund assets used to pay for operating expenses and management fees, including 12b-1 fees, administrative fees, and all other asset-based costs incurred by the fund, except brokerage costs. Fund expenses are reflected in the fund's NAV. Sales charges are not included in the expense ratio. The expense ratio for fund of funds only includes the wrap or sponsor fees and does not include the underlying fund fees.

Standard Deviation

A statistical measurement of dispersion about an average, which, for a mutual fund, depicts how widely the returns varied over a certain period of time. Investors use the standard deviation of historical performance to try to predict the range of returns that are most likely for a given fund. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility. Standard deviation is most appropriate for measuring risk if it is for a fund that is an investor's only holding. The figure can not be combined for more than one fund because the standard deviation for a portfolio of multiple funds is a function of not only the individual standard deviations, but also of the degree of correlation among the funds' returns. If a fund's returns follow a normal distribution, then approximately 68 percent of the time they will fall within one standard deviation of the mean return for the fund, and 95 percent of the time within two standard deviations. Morningstar computes standard deviation using the trailing monthly total returns for the appropriate time period. All of the monthly standard deviations are then annualized

Sharpe Ratio

A risk-adjusted measure developed by Nobel Laureate William Sharpe. It is calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe Ratio, the better the fund's historical risk-adjusted performance. The Sharpe ratio is calculated for the past 36-month period by dividing a fund's annualized excess returns by the standard deviation of a fund's annualized excess returns. Since this ratio uses standard deviation as its risk measure, it is most appropriately applied when analyzing a fund that is an investor's sole holding. The Sharpe Ratio can be used to compare two funds directly on how much risk a fund had to bear to earn excess return over the risk-free rate.

The Sharpe Ratio can be calculated one of three ways:

1. Standard Sharpe Ratio (SharpeRatio_M)
2. Arithmetic Sharpe Ratio (SharpeRatio_A)
3. Geometric Sharpe Ratio (SharpeRatio_G)

$$\text{Sharpe Ratio}_M = \frac{\left(\frac{\sum_{i=1}^n R_i}{n} \right) - \left(\frac{\sum_{i=1}^n RF_i}{n} \right)}{\text{St Dev}_M}$$

$$\text{Sharpe Ratio}_A = \frac{\left[\prod_{i=1}^n (1+R_i) \right]^{\frac{m}{n}} - \left[\prod_{i=1}^n (1+RF_i) \right]^{\frac{m}{n}}}{\text{St Dev}_A}$$

$$\text{Sharpe Ratio}_G = \frac{\left[\prod_{i=1}^n (1+R_i) \right]^{\frac{m}{n}} / \left[\prod_{i=1}^n (1+RF_i) \right]^{\frac{m}{n}} - 1}{\text{St Dev}_A}$$

where,

$$\text{St Dev}_M = \sqrt{\frac{1}{n-1} \cdot \sum_{i=1}^n (R_i - \bar{R})^2}$$

$$\text{St Dev}_A = \text{St Dev}_M \cdot \sqrt{m}$$

and

St Dev_A = Annualized Standard Deviation

St Dev_M = Standard deviation

R_i = Return of the investment in time period i

RF_i = Return of the risk-free investment in time period i

m = Number of time periods in a year

n = Total number of time periods

\bar{R} = Average return of the investment over the time period

Information Ratio

Information ratio is a risk-adjusted performance measure. The information ratio is a special version of the Sharpe Ratio in that the benchmark doesn't have to be the risk-free rate. The Israelson method is an adjustment of the Information Ratio to take into account the inconsistency of the IR when excess returns are negative.

$$Ratio_{\text{Israelson}} = \frac{ER}{Risk^{\frac{ER}{abc(ER)}}} = \begin{cases} \frac{ER}{Risk} & \text{if } ER \geq 0 \\ ER \cdot Risk & \text{if } ER < 0 \end{cases}$$

Max Gain

The peak to trough incline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak to the trough.

Max Drawdown

The peak to trough decline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak to the trough.
