3. Market Developments in Second-Quarter 2026

Global equity markets staged a powerful rebound in the second quarter of 2026, as strong earnings and easing geopolitical tensions fueled a broad-based rally led by technology and AI-linked names globally. In the US, equity markets rebounded sharply in the second quarter of 2026, reversing the weakness seen earlier in the year. The Dow Jones Industrial Average gained 12.90% over the quarter, while the S&P 500 and Nasdaq Composite rose 14.87% and 21.41%, respectively, as investor sentiment improved and appetite for growth and technology names returned. On a first-half basis, all three benchmarks remained solidly positive, with the Dow, S&P 500, and Nasdaq up 8.85%, 9.55%, and 12.79% respectively, as the second-quarter rally more than offset the losses recorded in the first three months of the year.

Top Performers

South Korea's KOSPI remained the standout performer globally, surging 67.77% in the second quarter and 101.14% over the first half of 2026, as investor enthusiasm for semiconductor and AI-related names showed no signs of slowing. Taiwan's TAIEX also extended its rally, climbing 45.40% for the quarter and 59.25% for the first half, supported by sustained demand from chipmakers and electronics exporters tied to the global AI supply chain. Japan's Nikkei 225 rounded out the top three, advancing 37.21% in the second quarter and 39.18% for the first half, aided by continued strength in export-oriented and technology-linked shares.

Weakest Performers

At the other end of the spectrum, Indonesia's JSX Composite remained the weakest market globally, falling 19.93% in the second quarter and 34.74% over the first half, as a plunging currency and continued capital outflows weighed on sentiment. Hong Kong's Hang Seng Index was also among the weakest, declining 7.69% for the quarter and 10.73% for the first half, amid persistent concerns over China's growth outlook. Rounding out the laggards, Brazil's Ibovespa fell 8.24% in the quarter (though it remained up 6.76% for the first half), while India's BSE Sensex declined 10.26% on a first-half basis despite a 6.30% second-quarter gain, as valuations remained a key concern for investors following the sharp declines earlier in the year.

Bond Markets

Amid geopolitical uncertainty and inflationary worries throughout the quarter, most fixed-income sectors eked out positive gains. Credit-sensitive sectors such as emerging-market debt, municipal bonds, and high-yield credit outperformed high-quality and long-duration bonds, like US Treasuries and agency mortgage-backed securities. Strong corporate fundamentals and a healthy economy continued to provide tailwinds for credit-focused strategies as spreads tightened further during the quarter.

Yield changes across fixed-income sectors were a mixed bag in the second quarter. Investors' risk appetite was relatively strong, which drove yield levels in riskier sectors, like high-yield bonds and emerging-market sovereign debt, lower during the quarter. However, heightened inflation readings and increased expectations of rate hikes in 2026 caused Treasury yields and other rate-sensitive parts of the market, like US core bonds and mortgage-backed securities, to rise. Still, yields are above 10-year median levels across sectors.

Looking ahead, there's a chance rates will remain relatively high and yields attractive. The market now expects two federal-funds rate hikes (0.5 points total) in 2026. In parallel, the European Central Bank and the Bank of Japan are expected to continue their rate hike campaigns. The oil price shock is only one contributor among several fueling expectations of rate hikes. Hence, oil prices easing off their April/May highs hasn't much altered expectations for key policy interest rates.

A [softer-than-expected](#) US June inflation reading may reduce the need for hikes, but rate cuts are likely not on the table for 2026.

The Outlook

Oil rose and global stocks tumbled when the Iran war began on Feb. 28, resulting in an ugly March across most asset classes and regions. While efforts to end the fighting have foundered, the on-again-off-again ceasefire appears to have calmed equity markets and reversed oil's price spike. US President Donald Trump, however, declared that the ceasefire was dead and renewed strikes on Iran, increasing uncertainty and jeopardizing Brent crude's two-month decline.

The second quarter's rebound flipped several major markets from red to green and overall brought the [Morningstar Global Markets ex US Index](#) almost 13% higher for the year, after its 10% March decline. Every major European stock market is now positive for the year, with six—Sweden, Germany, Italy, Greece, France, Spain—bouncing back from modest declines in the first quarter.

While the US market as a whole isn't in the bargain bin, there are still some pockets of value available for price-conscious investors. Valuations for [international stocks](#), in particular, remain lower than those of their domestic counterparts, despite the strong gains in non-US stocks in both 2025 and 2026.

The broad Asian market gained around 32% in the second quarter as Iran war risks abated and positive artificial intelligence spending outlooks drove exceptional gains for the technology sector. Asian tech companies have gained almost 93% in the second quarter. Other sectors saw more pedestrian returns. The consumer defensive sector continued to fall on Iran war risks to input costs, while the pullback in healthcare may reflect profit-taking after strong gains in 2025.

Of our China/Hong Kong coverage, 78%, inclusive of dual listings, are now in 4- or 5-star territory, up from 62% in the first quarter. Further falls in the share prices of e-commerce, travel, consumer defensive, and healthcare companies have increased outperformance ratings in our China coverage. The undervalued names in our technology coverage are mainly solar-panel-related entities, where excess capacity remains a near-term risk.

Japan's solid gains were also led by the tech sector, but positive returns were more broad-based.

The technology sector's strong rebound from the pullback in the March quarter has moved it from a 14% discount to our intrinsic value to being overvalued by 24%. We would prefer to see around a 20%-30% correction in technology share prices before we consider buying. Notably, the defensive sectors have gotten cheaper. In particular, healthcare is seeing a steeper 20% average discount to our fair values, up from 4%.

This is due to unique factors among the stocks we cover, which resulted in mixed March-quarter earnings performances and outlooks. However, we think that negative news is reflected and valuations are attractive. Inflation presents a risk to consumer companies, with domestic sales facing pressure. The downtrading trend to more mass products from the premium end may continue to hurt margins, especially with input costs staying firm.

Despite the broad Japan market gaining 23% in the second quarter, the percentage of 4- and 5-star-rated companies in our Japanese coverage is largely stable at 38%. Positive earnings guidance following the March-quarter results has led to raised valuations, and we still see buying opportunities across most sectors. The weakness in the Japanese yen is anticipated to provide some support to the exporters.

On fixed income, despite the rate cut in December 2025, yields on cash are still higher than inflation, making fixed-income securities relatively attractive.

The midpoint of the target range for the federal-funds rate stood at about 3.64% as of June 30, down from a high of 5.33% in 2024. However, the fed-funds rate remains significantly higher than its low of 0.04% as of late 2011, when the Federal Reserve's zero interest rate policy reached its nadir. In the wake of the global financial crisis, the Fed aggressively dropped short-term rates to near zero to stabilize the economy. It also purchased US Treasuries and agency mortgages as another way to keep bond yields low. ZIRP and successive rounds of quantitative easing led to a nearly 15-year period of low borrowing costs.

More broadly, yields on high-quality fixed-income securities remain significantly higher than they were a few years ago. When rates were extremely low, there was nowhere for yields to go but higher and nowhere for bond prices to go but lower. Now we're clearly in a different environment, making bonds more attractive than they were a decade ago.

4. Summary: Performance of CPFIS-Included Funds

Exhibit 8 Average Return of CPFIS-Included Funds at End of 2Q 2026 (% in SGD)

	For the period ended Jun. 30, 2026 (% in SGD)			
Average Returns	3 months	1 Year	3 Years (Cumulative)	3 Years (Annualized)
All CPFIS-Included Funds	12.90	21.99	42.12	11.93
Unit Trusts Only	13.13	22.84	43.66	12.28
ILPs Only	12.73	21.36	41.07	11.70

Source: Morningstar Direct.

Exhibit 9 Average Performance of CPFIS-Included Funds at End of 2Q 2026 (% in SGD)

Source: Morningstar Direct.

In the second quarter of 2026, CPFIS-included funds staged a strong rebound amid a broad-based recovery in global equity markets and improving investor sentiment. The average return across all CPFIS-included funds rose 12.90% over the quarter, with longer-term performance also strengthening to gains of 21.99% over one year and a cumulative return of 42.12% over three years.

- The performance of Unit Trusts rose 13.13% during the quarter. Unit Trusts continued to lead on a longer-term basis, delivering returns of 22.84% over one year and a cumulative gain of 43.66% over three years.
- Investment-linked insurance products (ILPs) also posted a solid recovery, gaining 12.73% over the quarter while posting one-year returns of 21.36%. Over a three-year period, ILPs achieved a cumulative return of 41.07%.
- In comparison, global benchmark indices also rallied during the quarter, with MSCI AC Asia ex Japan rising 28.04% and MSCI World Index rising 14.05%.

Exhibit 10 Average Performance of CPFIS-Included Funds at End of 2Q 2026 by Asset Class (% in SGD)

Source: Morningstar Direct.

Performance across asset classes was broadly positive in the second quarter of 2026 as improving market sentiment and a rebound in risk assets lifted returns across the board. Equity funds led the recovery, rising 16.53% over the quarter amid a broad-based rally in global equity markets. Allocation funds also gained 10.89% during the quarter, while fixed income funds posted a milder increase of 1.39%. Capital preservation funds remained largely flat, edging up just 0.29% over the three-month period, consistent with their defensive positioning.

- Equity funds continued to lead over longer time horizons, generating returns of 28.96% over one year and an impressive cumulative gain of 53.23% over three years, equivalent to strong double-digit annualized performance.
- Allocation funds also delivered healthy longer-term returns, rising 16.84% over one year and 34.95% cumulatively over three years, supported by diversified exposure across both equities and fixed income markets.
- Fixed income funds posted more muted gains of 1.98% over one year and 10.06% cumulatively over three years.
- Meanwhile, capital preservation funds continued to provide steady but conservative returns, gaining 1.30% over one year and 8.24% cumulatively over three years, underscoring their defensive characteristics amid uncertain market conditions.

Exhibit 11 Average Performance of CPFIS-Included Unit Trusts at End of 2Q 2026 by Asset Class (% in SGD)

Source: Morningstar Direct.

In the CPFIS-Included unit trusts universe, equity funds led the rebound with gains of 15.32% in the second quarter of 2026, followed by allocation funds at 12.64%, while fixed income funds posted a more modest increase of 1.52%. Over the one-year period, equity funds advanced 27.16%, allocation funds rose 17.53%, and fixed income funds gained 2.22%. On a three-year cumulative basis, equity funds delivered a strong 50.74% return, with allocation funds up 33.49% and fixed income funds up 11.60%.

Exhibit 12 Average Performance of CPFIS-Included ILPs at end of 2Q 2026 by Asset Class (% in SGD)

Source: Morningstar Direct.

In the CPFIS-Included ILPs universe, equity funds led the rebound with gains of 18.02% in the second quarter of 2026, followed by allocation funds at 10.66%, while fixed income funds posted a more modest increase of 1.30%, and capital preservation funds were roughly flat at 0.29%.

Source: Morningstar Direct.

In the second quarter of 2026, the top three best-performing CPFIS-included unit trust categories over a 3-month period were the EAA Fund Asia ex-Japan Equity (32.87%), EAA Fund China Equity - A Shares (31.45%), and EAA Fund Asia-Pacific ex-Japan Equity (27.84%). The strong performance of Asia ex-Japan and Greater China-focused funds was supported by improving regional economic conditions, robust investor sentiment, and continued strength in technology and semiconductor-related sectors.

In contrast, the worst-performing categories over the quarter were the EAA Fund China Equity (-0.64%), EAA Fund Other Bond (0.67%), and EAA Fund Asia Bond (0.90%). China equities lagged their A-Shares counterpart while bond-oriented categories broadly underperformed as investors rotated into risk assets during the quarter, dampening demand for fixed income exposure.

Over a one-year timeframe, the EAA Fund Sector Equity Biotechnology emerged as the best-performing category, delivering an exceptional return of 91.96%, driven by renewed optimism in the biotechnology sector, increased AI-driven healthcare innovation, and improving investor appetite for higher-growth industries. Conversely, the EAA Fund India Equity recorded the weakest performance, declining 13.02%.

On a three-year cumulative basis, the EAA Fund Sector Equity Biotechnology delivered the strongest long-term performance, achieving an outstanding return of 102.63%, supported by sustained innovation-driven gains and strong investor demand for the sector. The EAA Fund Europe Large-Cap Growth Equity, however, was the weakest performer over the same period, posting a modest cumulative gain of just 2.81%.

Source: Morningstar Direct.

In the second quarter of 2026, the performance of ILP categories was broadly similar to their unit trust counterparts. The top three best-performing CPFIS-included ILP categories over a 3-month period were the EAA Insurance Sector Equity Technology (41.49%), EAA Insurance Asia ex-Japan Equity (37.09%), and EAA Insurance Global Emerging Markets Equity (29.98%).

In contrast, the worst-performing categories over the quarter were the EAA Insurance Money Market - Other (0.29%), EAA Insurance Other Equity (0.78%), and EAA Insurance Other Bond (0.85%).

Over a one-year timeframe, the EAA Insurance Asia ex-Japan Equity emerged as the best-performing category, delivering a strong return of 64.31%. Conversely, the EAA Insurance India Equity recorded the weakest performance, declining 14.56%.

On a three-year cumulative basis, the EAA Insurance Sector Equity Technology delivered the strongest long-term performance, achieving an outstanding return of 124.58%. The EAA Insurance Europe Large-Cap Blend Equity, however, was the weakest performer over the same period, posting a modest cumulative gain of just 3.21%.

5. Summary of Performance

The Morningstar Rating is based on funds' risk-adjusted returns within its Morningstar Category peer group. Morningstar gives more weight to downside variation when calculating Morningstar Risk-Adjusted Return because investors are generally risk-averse and dislike downside variation. The Morningstar Rating is calculated within each Morningstar Category peer group because the relative star ratings of two funds should be affected more by manager skill than by market circumstances or events that lie beyond the fund managers' control. The Morningstar Rating is based on MRAR, using Morningstar Risk-Adjusted Return % Rank for funds in a category. Morningstar calculates ratings for the three-, five-, and 10-year periods, and then the overall Morningstar Rating is based on a weighted average of the available time-period ratings.

Exhibit 15 The Weight of Overall Morningstar Rating

The overall Morningstar Rating weight is shown below:

Months of Total Returns	Overall (Weighted) Morningstar Rating
36-59	100% of three-year rating
60-119	60% of five-year rating 40% of three-year rating
120 or more	50% of 10-year rating 30% of five-year rating 20% of three-year rating

Source: Morningstar Direct.

There are certain cases where funds are *ineligible* for a Morningstar Rating. This includes funds that are:

- Categorized in any Other/Miscellaneous category;
- Restricted funds;
- Virtual share classes: Also known as a *convenience* or *currency* class, virtual classes are investments whose performance is quoted in another currency or allow investors to purchase shares in a currency other than its base currency;
- Inception date/performance start date is shorter than 36-month continuous monthly returns available;
- Dormancy history led to shorter than 36-month continuous monthly returns available;
- Obsolete funds;
- Funds whose peer group contains fewer than five distinct portfolios.

Morningstar Rating ("Star Rating")

To determine a fund's star rating for a given time period (three, five, or 10 years), the fund's risk-adjusted return is plotted on a bell curve: If the fund scores in the top 10% of its category, it receives 5 stars (Highest); if it falls in the next 22.5%, it receives 4 stars (Above Average); a place in the middle 35% earns 3 stars (Average); those lower still, in the next 22.5%, receive 2 stars (Below Average); and the bottom 10% get only 1 star (Lowest). The Overall Morningstar Rating is a weighted average of the available three-, five-, and 10-year ratings.

Morningstar Return Rating

An annualized measure of a fund's excess return relative to the return of the 90-day Treasury bill over a three-, five-, or 10-year period. This is a component of the MRAR. Morningstar Return is displayed in decimal format and is calculated only for those investments with at least three years of performance history.

Morningstar Risk Rating

An annualized measure of a fund's downside volatility over a three-, five-, or 10-year period. This is a component of the MRAR. Morningstar Risk is displayed in decimal format and is calculated only for those investments with at least three years of performance history. A high number indicates higher risk and low numbers indicate lower risk.

Morningstar Fee Level

The Morningstar Fee Level evaluates a mutual fund share class' expense ratio relative to other funds that invest in a similar asset class and have similar distribution characteristics. Within each Comparison Group, a fund share class' expense ratio is ranked against its peers using five quintiles. Each quintile corresponds to one of the following scores:

- Low: Least Expensive quintile
- Below Average: Second Least Expensive quintile
- Average: Middle quintile
- Above Average: Second Most Expensive quintile
- High: Most Expensive quintile

Morningstar Sustainability Rating

Morningstar assigns Sustainability Ratings by ranking all scored funds within a Morningstar Global Category by their Historical Sustainability Scores. The ranked funds are then divided into five groups, based on a normal distribution, and each receives a rating from High to Low. Although a higher rating is better than a lower one, please note that owing to the risk component of the scores, lower scores are better (and lead to higher ratings) than higher scores and indicate that a fund is, on average, invested in fewer companies with a high environmental, social, or governance risk under Sustainalytics' ESG Risk methodology and therefore exposed to less risk driven these aforementioned factors.

Percent Rank Rating Depiction

- Top 10%: High/5 globes
- Next 22.5%: Above Average/4 globes
- Next 35%: Average/3 globes
- Next 22.5%: Below Average/2 globes
- Bottom 10%: Low/1 globe

To receive a Portfolio Sustainability Score, at least 67% of a portfolio's assets under management must have a company ESG Risk Rating. The percentage of assets under management of the covered securities is rescaled to 100% before calculating the Portfolio Sustainability Score.

5.1 Morningstar Ratings for CPFIS-Included Unit Trusts

Full List of CPIFS Included UTs With Morningstar Data

Note: Funds need 36 months of performance history to have a Morningstar Rating, and certain categories are not eligible for rating. For a Sustainability Rating, at least 67% of the portfolio's AUM must have a company ESG Risk Rating.

List A Funds

List A—Funds that have met all new admission criteria: i) The revised benchmark set at the top 25 percentile of funds in their global peer group; ii) The expense ratio is not higher than that set by the CPF Board by the respective risk class. The expense ratio criteria also applies to existing funds from Jan. 1, 2008, onward; iii) A 0% sales charge; iv) New funds applying for inclusion under CPFIS should preferably have a track record of good performance for at least three years.

Cum Ret = the cumulative return

y = the number of years (one, three, five, or 10)

For customized time periods returns are annualized as follows:

$$\text{Ann Ret} = ((1 + \text{Cum Ret}/100)^{(365.25/d)} - 1) * 100$$

where,

Cum Ret = the cumulative return

d = the number of days between the start and end date

Annual Report Net Expense Ratio

The percentage of fund assets used to pay for operating expenses and management fees, including 12b-1 fees, administrative fees, and all other asset-based costs incurred by the fund, except brokerage costs. Fund expenses are reflected in the fund's NAV. Sales charges are not included in the expense ratio. The expense ratio for fund of funds only includes the wrap or sponsor fees and does not include the underlying fund fees.

Standard Deviation

A statistical measurement of dispersion about an average, which, for a mutual fund, depicts how widely the returns varied over a certain period. Investors use the standard deviation of historical performance to try to predict the range of returns that are most likely for a given fund. When a fund has a high standard deviation, the predicted range of performance is wide, implying greater volatility. Standard deviation is most appropriate for measuring risk if it is for a fund that is an investor's only holding. The figure cannot be combined for more than one fund because the standard deviation for a portfolio of multiple funds is a function of not only the individual standard deviations, but also of the degree of correlation among the funds' returns. If a fund's returns follow a normal distribution, then approximately 68% of the time they will fall within one standard deviation of the mean return for the fund and 95% of the time within two standard deviations. Morningstar computes standard deviation using the trailing monthly total returns for the appropriate period. All of the monthly standard deviations are then annualized.

Sharpe Ratio

A risk-adjusted measure developed by Nobel laureate William Sharpe. It is calculated by using standard deviation and excess return to determine reward per unit of risk. The higher the Sharpe ratio, the better the fund's historical risk-adjusted performance. The Sharpe ratio is calculated for the past 36-month period by dividing a fund's annualized excess returns by the standard deviation of a fund's annualized excess returns. Since this ratio uses standard deviation as its risk measure, it is most appropriately applied when analyzing a fund that is an investor's sole holding. The Sharpe ratio can be used to compare two funds directly on how much risk a fund had to bear to earn excess return over the risk-free rate.

The Sharpe ratio can be calculated one of three ways:

1. Standard Sharpe ratio (SharpeRatio_M)
2. Arithmetic Sharpe ratio (SharpeRatio_A)
3. Geometric Sharpe ratio (SharpeRatio_G)

$$\text{Sharpe Ratio}_M = \frac{\left(\frac{\sum_{i=1}^n R_i}{n} \right) - \left(\frac{\sum_{i=1}^n RF_i}{n} \right)}{\text{St Dev}_M}$$

$$\text{Sharpe Ratio}_A = \frac{\left[\prod_{i=1}^n (1 + R_i) \right]^{\frac{m}{n}} - \left[\prod_{i=1}^n (1 + RF_i) \right]^{\frac{m}{n}}}{\text{St Dev}_A}$$

$$\text{Sharpe Ratio}_G = \frac{\left[\prod_{i=1}^n (1 + R_i) \right]^{\frac{m}{n}} / \left[\prod_{i=1}^n (1 + RF_i) \right]^{\frac{m}{n}} - 1}{\text{St Dev}_A}$$

where,

$$\text{St Dev}_M = \sqrt{\frac{1}{n-1} \cdot \sum_{i=1}^n (R_i - \bar{R})^2}$$

$$\text{St Dev}_A = \text{St Dev}_M \cdot \sqrt{m}$$

and

St Dev_A = Annualized Standard Deviation

St Dev_M = Standard deviation

R_i = Return of the investment in time period i

RF_i = Return of the risk-free investment in time period i

m = Number of time periods in a year

n = Total number of time periods

$\bar{R}$ = Average return of the investment over the time period

Information Ratio

Information ratio is a risk-adjusted performance measure. The information ratio is a special version of the Sharpe ratio in that the benchmark doesn't have to be the risk-free rate. The Israelson method is an adjustment of the information ratio to take into account the inconsistency of the IR when excess returns are negative.

$$Ratio_{Israelson} = \frac{ER}{Risk \cdot \frac{ER}{abs(ER)}} = \begin{cases} \frac{ER}{Risk} & \text{if } ER \geq 0 \\ ER \bullet Risk & \text{if } ER < 0 \end{cases}$$

Max Gain

The peak-to-trough incline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak and the trough.

Max Drawdown

The peak-to-trough decline during a specific record period of an investment or fund. It is usually quoted as the percentage between the peak and the trough.
